DETAILED ACTION

Response to Amendment

1. The applicant has elected claims 1-6 drawn to a composition containing lactyllactates.

Claim Rejections - 35 USC § 102/103

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- (e) the invention was described in (1) an application for patent; published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- (e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

10/510,929 Art Unit: 1796

- 2. Claims 1-6 are rejected under 35 U.S.C. 102(e) as being anticipated or alternatively as rendered obvious by Fuertes et al (US 2003/0008927).
- Fuertes teaches compositions of lactic acid ester and their use as solvents. In the abstract Fuertes teaches specific esters including those polyalkyl lactyllactates found in instant claim 1.
- 4. In the examples Fuertes teaches various reaction methods creating a range of ester products. Thus it demonstrate it is well within know skills to vary the degree of polymerization of these esters. Furthermore, it would have been obvious to vary the concentration of the esters to form the specific mixture of instant claim 4.
- 5. Claims 1-6 are rejected under 35 U.S.C. 102(e) as being anticipated or alternatively as rendered obvious by Cockrem (US 6,664,413).
- 6. Cockrem teaches a method of manufacturing esters. In table 2, Cockrem teaches composition containing various lactate esters including those meeting the formula of instant claim 1.
- 7. Claims 1-6 are rejected under 35 U.S.C. 102(b) as being anticipated or alternatively as rendered obvious by Eyal (US 6,452,051).
- 8. Eyal teaches processes of producing condensation products of carboxylic acids. In column 6, Eyal teaches reaction paths that form lactate esters as well as lactvllactates.

10/510,929 Art Unit: 1796

- 9. Claims 1-6 are rejected under 35 U.S.C. 102(b) as being anticipated or alternatively as rendered obvious by Hammel et al (US 5,134,171).
- 10. Hamel teaches degradable foam materials. In claim 9 Hamel teaches the use of lacyllactates oligimers with a molecular weight below 450 (see also column 2 formulas 1-4). Thus meeting the formula of instant claim 1.
- 11. Claims 1-6 are rejected under 35 U.S.C. 102(b) as being anticipated or alternatively as rendered obvious by Jacklin et al (US 5,124,166).
- 12. Jacklin teaches esters for use as edible fat mimetics.
- 13. Jacklin teaches as a suitable ester for their compositions oligimers of lactic acid including dimmers, trimers and tetramers (see col. 4, lines 54-68).

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Gregory E. Webb whose telephone number is 571-272-1325. The examiner can normally be reached on 9:00-17:30 (m-f).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Harold Pyon can be reached on 571-272-1498. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
